

CHERRIES

16# / #F340500

\$61.40/CA

Hood River High Altitude Cherries, these cherries are special, the trees have room to grow and produce about half the tonnage of a traditional orchard but high nutrient and sweeter fruit. The cherries are left on the trees to ripen and brix at 21 compared to industry standard of 15. Best of all, they are at their peak right now due to the high altitude the cherries take longer to mature and are available later in the season.
